

### END-OF-LINE QUALITY ASSURANCE

### Features and Benefits

- Detection accelerometer, microphone and force
- Component and Impact testing
- Designed for Production Lines
- Overlay reference results with live measurements.
- calculate between inputs on time, angular, spectral and order domains
- Swiftly Identify Product Defects
- Mask editor and alarms
- Grade products by quality level
- Improve quality and efficiency
- Reduce after sales expenses

### Designed for industrial production processes

Cracking, shaft misalignment, creaking, whirring, unbalancing, ticking - some operating noises or gross material can indicate a manufacturing defect or affect user confidence in the product
